DATE MAILED: 09/15/2006				

Please find below and/or attached an Office communication concerning this application or proceeding.

## Office Action Summary

**Application No.**

10/662,699

**Applicant(s)**

SWERIN ET AL.

**Examiner**

Dionne Walls Mayes

**Art Unit**

1731

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 23 August 2006.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-30 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-30 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \*    c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

### Attachment(s)

## **DETAILED ACTION**

### ***Withdrawal of Finality/Re-opening of Prosecution***

1. The Advisory Action mailed on 9/8/06 was sent in error. Prior to that, the Examiner had erroneously sent out a Final Rejection, on February 23, 2006, instead of a Non-Final Rejection in response to the filing of a Request for Continued Examination on February 8, 2006. Therefore, the FINALITY of the rejection mailed on February 23, 2006 has been WITHDRAWN, and PROSECUTION IS HEREBY REOPENED.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1,4,5,7-14,16,19-21,23-27, and 29 are rejected under 35 U.S.C. 102(b) as anticipated by Sandstrom et al (US. Pat. No. 6,379,497).

Sandstrom et al discloses a three layer single ply paper board. The central layer is a high-bulk layer containing bulk enhancing additives such as microspheres (which includes the claimed "vinylidene chloride" of claim 7), chemically-treated high bulk fibers and other bulk enhancing additives (see columns 6 and 21). Retention aids, binders, and fillers are also disclosed as being used in the paper (see columns 34 and 35). The surface layers of the board are surface sized/coated with starch or epoxy resins (corresponding to the claimed "crosslinking agents" of claim 11) – which can contain pigments (see columns 5,12,13,18,21,31). The size or coating composition depends on

Art Unit: 1731

the kind of article for which the paperboard is used, but when starch is selected as the sizing agent, the solids content is preferably between 20-40% (corresponding to the claimed "between 6% and 20%" of claims 5, 27 and 29). Also, Sandstrom states that the paperboard structure is an I-beam structure (see col. 39, line 19). Thus, Sandstrom anticipates the claimed invention.

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 2,3,6,15,17,18,22,28 and 30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sandstrom et al (US. Pat. No. 6,379,497).

Regarding claims 2,3,15,17 and 18, it would have been obvious to employ the claimed coating/film thickness and weights as it depends on the type of article or final product for which the paperboard is intended.

Regarding claims 6 and 22, the use of the claimed diamide salt as the bulk enhancing additive in Sandstrom et al would have been obvious since it is a conventional and commercially available bulk enhancing additive as evidenced by page 6 of the instant specification.

Regarding claims 28 and 30, it would have been obvious to one having ordinary skill in the art at the time of the invention to have arrived at the claimed starch solids

range, after routine experimentation, in order to provide an optimal moduli of elasticity to the layers.

### ***Response to Arguments***

6. Applicant's arguments filed August 23, 2006 have been fully considered, but like those presented previously, they are not persuasive.

- Applicant continues to argue that the Sandstrom et al reference teaches away from an I-beam structure when using higher than "typical" weight % of size press-applied starch solids, and when there is starch penetration into the central cellulose paper layer; however, once again, the Examiner disagrees and finds no convincing evidence of this. Applicant also asserts that Examiner has taken the position that an I-beam structure is inherent in the paperboard disclosed in Sandstrom et al. The Examiner believes that inherency infers that such is not stated in the reference. Col. 39, lines 14-20, of Sandstrom clearly states that its paper is believed to generate an "I-beam" effect, due to the combined effect of bulk-enhancement and application of size at a high-solids level, that improves bending stiffness of the paper. There are a myriad of patents that suggest, if not state, that an "I-beam arrangement" in paper products occurs when outer layers exhibit high strength/density compared to the central/core layer of cellulosic fibers which exhibit low density, but increased bulk (See, for example, Chadha – US. Pat. No. 5,649,478). There is every indication, in Sandstrom, that its paper product exhibits these qualities – even though there is starch penetration into the inner core layer, and a higher starch-solid content. Just because there may not be explicit "performance data", found in the examples or elsewhere in the reference, to

Art Unit: 1731

“prove” the assertion that an “I-Beam effect” occurs does not indicate that such is not the case – even given the fact that starch-solid content is higher or that there is penetration into the core. Throughout the reference of Sandstrom, it is clear that the layers of its paper product, due to the size-press starch, are intended to be thicker – which gives it a higher moduli of elasticity – to improve bending and tensile stiffness. This allows for the desired paper rigidity even when a reduced weight of papermaking fibers is utilized (See col. 30). Sandstrom then indicates, further in the reference, that the true function of this arrangement in col. 39, line 14-19 – is that of an “ I-Beam effect” – and the Examiner believes that there is no indication that at least one of the embodiments disclosed in Sandstrom et al would not have this effect.

### ***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dionne Walls Mayes whose telephone number is (571) 272-1195. The examiner can normally be reached on Mon-Fri, 7AM - 4:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Steven P. Griffin can be reached on (571) 272-1189. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
